

# Module 2

Week 2 | Day 1 | **Building a Microservice**

# Last Week in Today:

- Intro to Domain Driven Development
  - Bounded Contexts
  - Value Objects
  - Aggregates
- Building an API
  - Working with JSON
  - Returning JSON Objects
  - Using Encoders
  - Understand RESTful structure
  - Simple Docker

# Goals for the Week

- Building a Microservice System
  - Creating microservice django projects
  - Using multiple Docker Containers
  - Communication between Docker Containers
- Syncing Data in Microservice Systems
  - Polling
  - Queues
  - Pub/Sub
- Getting started in Javascript

# What about today, though?

- Building a Microservice
- Dockerizing Multiple Microservices
- Working with Value Object Tables
- Syncing Data through Polling

Question of the Day?

# What is in a microservice?

- A complete django project
- All models and database associated with that service.
- All urls and JSON views associated with that service
- It's own docker container running on it's own port.

# How do we sync?

- Smart way.
- The way we are doing it today...

# How do we sync?

- Smart way.
  - We see a conference is being added to monolith service
  - Send a message to attendee service to add a corresponding ConfVO
- The way we are doing it today...

# How do we sync?

- Smart way.
  - We see a conference is being added to monolith service
  - Send a message to attendee service to add a corresponding ConfVO
  - **Pub/Sub**
- The way we are doing it today...

# How do we sync?

- Smart way.
  - We see a conference is being added to monolith service
  - Send a message to attendee service to add a corresponding ConfVO
  - **Pub/Sub**
- The way we are doing it today...
  - Every X seconds, attendee service can make a call to monolith for all conferences
  - If there new conferences, add them
  -

# How do we sync?

- Smart way.
  - We see a conference is being added to monolith service
  - Send a message to attendee service to add a corresponding ConfVO
  - **Pub/Sub**
- The way we are doing it today...
  - Every X seconds, attendee service can make a call to monolith for all conferences
  - If there new conferences, add them
  - **Polling**
